SECURE

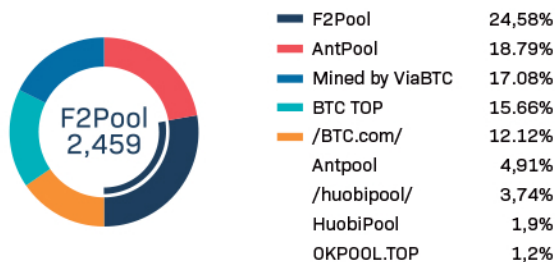

Hybrid AuxPow + DPoS

Elastos merge mines Bitcoin using AuxPoW enabling it to leverage the combined hashpower and security of the many participating mining pools with no additional cost to the miner.

MERGE-MINED

by the leading BTC Mining Pools

3X MORE EXPENSIVE TO ATTACK THAN ETH

PoW 51% Attack Costs (per hour)

BTC	> 900k
ELA	> 300k (40%+ of BTC)
ETH	~100k

ETHEREUM SMART CONTRACTS

100% Backwards Compatible

Develop Ethereum dApps without the hassle of Layer 2 Solutions. Run smart contracts directly on the Elastos ETH Sidechain without any modifications.

Leverage our DPoS + PoW Consensus to securely run at usable 500+ TPS speeds

ELASTOS TEAMS

We are formed by multiple teams spanning across the globe and supported by Cyber Republic regional teams in over 12 countries.

- 70+ Core Employees
- 50+ Software Engineers
- 14 Cyber Republic Regional Teams
- Commitment to open-source with over 100 repos

SIDECHAINS

Decentralized Identifier

Build on a foundation for decentralized identity where privacy and interoperability is made possible.

CARRIER

P2P Decentralized Network

With over 300k nodes globally and growing, the Elastos Carrier node allows secure end-to-end encryption and offline messaging passing in a decentralized network.

HIVE

Decentralized Storage

An optimized IPFS service that also supports traditional and new upcoming decentralized storage solutions.
